

## Coding Manual of Curated Gen 2/Omni 1 dataset

### Note:

1. This curated dataset contains information of Gen II and Omni 1 participants
2. There are 5630 unique FHS participants (5124 Gen II and 506 Omni 1) within this dataset\*, with a total of 1375 variables
3. Variables are generally grouped based on their origins (i.e., primary FHS dataset)
4. The format of the curated dataset is of wide format, with distinct variable names that allow users to tell the difference for repeated measurements of data of similar nature.
5. The first FHS core exam for Omni 1 participants started around the same time as the 6<sup>th</sup> FHS core exam for Gen II participants. However, the protocol that was used for the first FHS core exam for Omni 1 participants was that of Gen II's 5<sup>th</sup> FHS core exam. Hence, the baseline information extracted from the FHS core exams for all Omni 1 participants will have a suffix of “\_core5”. The corresponding Omni 1 core exams used in this dataset is as follow:

Omni 1 core exam cycle	Suffix
1	_core5
2	_core7
3	_core8
4	_core9

6. For protocol descriptions and annotated forms of the primary datasets, refer to the respective documents of the individual source datasets.
7. Refer to [Appendix](#) for FHS core exam timeline (all cohorts)

*\*According to standard FHS practice, 1 Omni 1 participant is removed as they did not show up for the baseline FHS exam*
